

Logistic centre

Based on former research concept and the needs of Free Zone users, it is necessary to develop the existing logistic centre and establish it on the following principles:

- setting up multimodal logistic terminal for truck reloading, non-escorted cargoes, goods and containers in international transport.
- installing necessary storage capacities connected to the reloading area.
- promoting the project as the part of business activity in Free Zone.

The current activities include the justification study of TLT and the talks with the clients expressing the interest and potential partners, as well as the research on the possibilities of raising the finance from EU funds.
